DETAILED ACTION

This Office Action is in response to the amendment filed October 19, 2004 for the above identified patent application.

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the means for producing rotational movement of the output member (50) illustrated in Figure 2, must be shown or the feature(s) canceled from the claim(s). Note, the written description (page 5, lines 12+) describes "In further embodiments, the output member 50 could move in a rotational direction and a detent arrangement 44 could act substantially perpendicular to this rotational direction..." No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining

figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 2-7 and 16-21 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. In light of the appeal decision (pages 6-7), it is understood the gear (24) in the instant application is considered an intermediate component and is not considered an output member, and therefore the screw (36) or prior art reference to Arnold et al is an intermediate component and cannot be considered the output member. Further, It is understood from the written description (page 5, lines 12+) the output member (50), illustrated in the elected embodiment of Figure 2, can be configured to move in a rotational direction. However, the written description does not clearly describe how output member (50) rotates and the Figures fail to clearly illustrate

Art Unit: 3682

the structural arrangement of output component (50) so as to allow a rotational movement. Accordingly, the disclosure fails to clearly describe the claimed device such that one in the art can make and/or use the device so as to produce a rotational movement of the output member (50).
